## Profile

Dedicated and fast-learning junior backend developer with a good foundation in Java and Python, and hands-on experience with Spring Boot. Successfully contributed to the development of a comprehensive tool for freelancers, showcasing a keen ability to adapt and deliver results. With a background in HR and Learning & Development, I bring exceptional project management skills, a collaborative mindset, and a passion for continuous improvement. I am committed to leveraging my technical skills and professional experience to add value to a forward-thinking tech company.

## Projects

### ProPilot Web Application

JANUARY 2024 – MAY 2024

Co-designed and implemented back-end infrastructure using Java and Spring Boot for “ProPilot” - a web application that helps freelancers in managing their business activity.

### Dining Review API (Java course Portfolio Project)

JULY 2024

Constructed RESTful web APIs, configured application properties for dependencies, including H2 embedded database, defined entities and repositories and defined API contracts.

### Python Terminal Game: "Who Wants to be a Millionaire" (Python course Portfolio Project)

NOVEMBER 2023

Created a trivia game with questions and three lifeline options. Correct answers increased the prize, while wrong answers stopped the game and applied the last "safeguarded" prize amount.
